EDUCATION

McMaster University

Hamilton, Canada

Bachelor of Engineering, Computer Engineering

September 2025 – May 2030

- Cumulative GPA: 3.9/4.0, recognized in top 1% of applicant pool across Faculty of Engineering

EXPERIENCE

Undergraduate Research Assistant

Hamilton, Canada

Estimation, Tracking and Fusion Lab

May 2026 - Aug 2026

- Built a drone tracking pipeline in MATLAB using simulated pulse-level radar against simulated drone flight scenarios, accurately representing the micro-Doppler effect
- Compared generated data against government data to ensure realism
- Improved simulation speed by parallelizing pulses per beam
- Paper submitted to ICCAIS 2026, currently under review
- Presented findings to Defense Research and Development Canada (DRDC)

Software Team Lead

Hamilton, Canada

McMaster Formula Electric

Apr 2026 - Present

- Ran a 20 member team, overseeing development of firmware, testing, data acquisition and metrics projects
- Led development of platform-agnostic firmware testing enabling verifiably correct software-in-the-loop (SIL) simulation.
- Rearchitected vehicle firmware to create platform-independent drivers
- Improved dashboard firmware to better handle CAN and display threads at the same time
- Created onboarding documentation to describe project structure and data flow for four major projects

Firmware Testing Member

Oct 2025 – Apr 2026

- Evaluated gRPC, Websockets and raw POSIX sockets for use in the hardware testing system, choosing raw POSIX sockets given the timing required (100Hz) and relative simplicity of data
- Implemented TCP layer between Go testing program and C++ SIL for real-time system interaction
- Contributed to a large (~200,000 LOC) repository, adhering to existing architecture and code standards

Co-Founder

Hamilton, Canada

FIRST Robotics Team 27831

Sep 2024 – Jun 2025

- Co-founded team and led development of core software systems
- Designed pose estimation system combining camera and encoder data
- Secured \$5k in sponsorship funding and supported team operations and mentorship

PROJECTS

Klawerjass | [Next.js](#), [Node.js](#), [PostgreSQL](#) [Github Link](#)

2023 – 2024

- Built full-stack multiplayer web application with real-time updates
- Implemented backend API and database integration with PostgreSQL

3D Engine in Scratch [Demo Link](#)

2022

- Designed and implemented a 3D rendering system using Scratch's pen-based drawing primitives in grade 10

TECHNICAL SKILLS

Languages: C/C++, Python, JavaScript, SQL

Protocols: CAN, SPI, I2C, UART

Systems: Embedded systems, Firmware, Hardware-Software Integration, Simulation/Testing Systems

Tools: Git, PlatformIO, Cmake, Github Actions
